(b) These rates have been fixed at the time of resettlement in 1913 on the basis of reclassification of soil with reference to the individual capacity of irrigation sources, and other irrigation facilities accruing therefrom and allowing also for cultivation expenses vicissitudes of seasonal conditions and an overall increase of 12½ per cent uniformly over the original settlement rates.

(c) The rates are higher for assured-water supply facilities only in respect of first-class sources. As regards second, third and fourth class sources, supply by them has improved on account of the improved conditions due to the construction of Papanasam and Manimuthar Reservoirs and the rates of assessment of lands under those sources are not high for assured water-supplies.
